

SYNETICS Jersey line-up, the polled offer !

All offered bulls are A2/A2 and BB without Haplotypes and sexed semen available

With the August proof run, SYNETICS continually provides a mainly polled line up with high production and modern linear profiles to its customer base. The focus on a Jersey typical, smaller stature cow, with complete profiles is a unique offer on JPI scale.

88% polled

100% sexed

Jersey bulls JPI

With a focus on “Jersey typical” bulls and on top being polled the small, unique and elite program of SYNETICS offers several interesting bulls:

- The first **Crystal-P** daughters are fresh in milk and the classification shows how balanced they are. In average they score GP-83 in all traits beside the feet & legs at GP-84. This is a perfect example of the reliability of SYNETICS Jersey bulls, they fully meet the expectations placed in them.
- **Diamo** received the first milking daughters too and they average 26kg with 5,02% fat and 3,46% protein in their second milk test. He is still one of the highest bulls for DPR with +2,2 what makes him very unique and a perfect complement to the SYNETICS portfolio.
- **Gerome P** (S. Gallentry) is one of the latest additions to the SYNETICS line-up and he shows very steady proofs. With his linear profile he is an excellent example for a commercial cow maker.
- The highest homozygote polled bull, **Maurice PP** (S. Motor-P) was able to demonstrate ones again with the August proof run his ability to transmit production combined with perfect, shallow attached udders with a strong central ligament and correctly placed longer teats.
